

Respectfully I wish to comment on NAB's petition 04-160 I feel that the use of satellite radio to transmit traffic and weather is reasonable and should be allowed to continue. I feel that the services provided by XM satellite radio is invaluable at home or on the road. Who know's where the local stations are or what time basis they are providing the information on traffic and weather in the local area. With the traffic and weather provided by the satellite services I know what is going on and can protect myself and others from time delays, wasted fuel and serious weather problems.
